

Kieran's Guide to Online safety for...

ROBLOX

What is Roblox?

Roblox is an app that allows us to play a wide variety of games, create games, and chat with friends online.

How old must you be to play Roblox?

Roblox provides content based on the age you provide when registering, so it's important you use the correct age. The NSPCC recommends you are 8+ years old.

Be careful what you share when playing Roblox online.

Roblox can be played as a multi-player game with anyone in the world. However, it is better to play only with people you know and trust.

Never share your real name, where you live, or secret information such as your passwords.

What parent safety features does Roblox have?

Parents can track which games we play within Roblox, read our chat and private message history, see who we are friends with, and approve our in-game payments.

Our parents use these features to make sure we are safe online.

If you are ready to test your online safety knowledge, then try the quiz at Kieran's stand during the event.
